

Find the difference between the two numbers and index into graph title
$9-7=2=A$

## Pol/s

Before the electon, Harvey "Two-Face" Dent was taking polls to see how people would vote on the issues. But it seems he like to manipulate the data in anyway that mets his needs. These graphs don't make any sense. I think he would do anything for a YES vote. In the end what's the one thing you can count on when all the data is tabulated?
