

Stockholm is buzzing with excitement for the upcoming Nobel Prize award ceremony. The six laureates are on their way from their home countries and you've been assigned to collect them from the airport. This is a record-breaking year with every single prize-winner under the age of 23. Unfortunately for you, that means they've sent you the details of the country they are flying from in the form of emoji. Can you figure out the order in which they will arrive at Stockholm airport? And who is with them in spirit?
